

# *Industrial Testbeds*

IMI management introduced the concept of developing a technology testbed program as a possible means of stress testing the technologies required for digital mining on a collaborative, risk and cost shared basis.

Through this initiative, in collaboration with our members, IMI developed an outline for a testbed program. Discussions were held with key players to discuss multiple areas for testbed projects of potential interest to our members.

Subsequently, IMI has been investigating the potential for developing and deploying a virtual testbed(s).

## **PROJECT INFORMATION:**

**Proponent:** IMI

**Project Duration:** January to March 2019

**Project Cost:** \$25,095

IMI Contribution: \$25,095
